

PRESS RELEASE

From training to the team: GEMAC congratulates graduates on passing their exams

Chemnitz, October 01, 2025 -

Successful exams, proud faces, and a team that sticks together: At GEMAC, we celebrate the achievements of our trainees and thus send a strong signal for the training of young professionals.

Training young people has been a high priority at GEMAC for many years. It is a central building block for the future of our company and, at the same time, an investment in the professional development of the next generation. Whether in the technical field or in administration, our trainees make an important contribution to the success of the entire team.

We are delighted that two of our trainees - an **industrial clerk** and an **industrial electrician for devices and systems** - have successfully completed their exams. We are particularly pleased that our industrial electrician is seamlessly transitioning into the second year of training as an electronics technician for devices and systems at GEMAC and continuing his second training program directly with us. GEMAC not only provides qualified training, but also the opportunity to expand one's knowledge and develop professionally - all under one roof and with direct support from our experienced team. We congratulate both of them and are proud that they are continuing their professional careers with us.

Mario Werner, our trainer since July 2024, emphasizes:

"Training our junior staff is a key building block for the future of GEMAC. I am delighted to accompany our trainees on their journey, to support them and prepare them as well as possible for their professional future. Passing their exams is a great success - both for the trainees themselves and for our entire team."

Our training team lives by the principle of "from practice to practice": Mario Werner himself trained at GEMAC as part of a retraining program from 2013 to 2015, with GEMAC as his internship company. He has been a permanent member of the company since 2015 and is now team leader in production. Many of our long-standing employees also completed their training with us—including our production manager Klaus Tröltzsch—and are still an integral part of the team today.

The excellent results show that our many years of experience in training are paying off. For many years, we have been successfully training skilled workers in commercial and technical professions—thus creating a reliable basis for securing our skilled labor needs.

We place particular emphasis on a corporate culture characterized by openness, team spirit, and mutual support. Modern workplaces, exciting projects, and individual support ensure that our trainees feel well cared for right from the start and can develop their strengths.

GEMAC is once again looking for motivated trainees for 2026, particularly for the profession of electronics technician for devices and systems. Our aim is to give young people the opportunity to start their professional future with sound training in an innovative environment.

We would like to congratulate our two graduates once again and look forward to continuing to support their development.
